Potting machine
TM 2400

The new Mayer.

Even those who are already convinced of the economy, productivity and versatility of the Mayer potting machines will truly rave over the new Mayer TM 2400: the wide range of pot sizes that can be used makes the TM 2400 a very flexible, multipurpose machine for which peak performances of up to 4000 respectively 7000 pots per hour are perfectly normal. The new Mayer - an innovation with star qualities.

TM 2400

At a glance

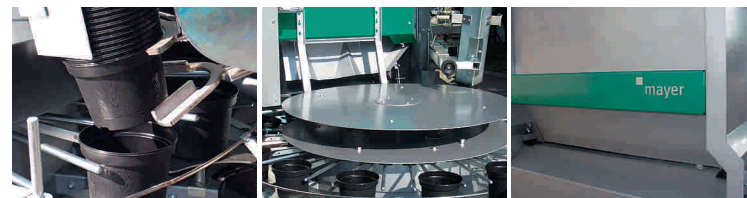

- The original Mayer circular system for maximum ergonomcy at work.
- Maximum smooth-running and precision, even at top production speeds
- Perfectly central planting holes for optimum planting quality
- Can be used for all pot sizes with diameters between 8 and 24 cm
- Productivity can nearly be doubled by means of a simple changeover (Double pot holders/double drilling system)
- Pot sizes and heights can be adjusted fast and centrally by means of a crank (standard)
- Electronic precision control of machine output by means of a frequency converter (easy to operate)
- Flexible arrangement of conveyor belt at 8 positions around the turntable
- Compatible with all popular automation and further transplanting systems
- Intelligently constructed soil hopper prevents so-called tunnel or bridge formation in the soil supply (protected by patents)
- High safety standards

A major plus in terms of productivity

The TM 2400 is distinguished just as much by the broad range of pot sizes that can be used as by its peak speeds of up to 4,000 respectively 7,000 pots per hour. Simply by changing over this multipurpose machine can nearly double its output in the twinkling of an eye.

Fantastic to handle

Again with the new TM 2400 innovative technology is coupled with ergonomic handling. The electronic frequency controls for the turntable and elevator ensure precise output control and are easy to operate via control button on the switchbox. Greater efficiency is also ensured by the new construction of the soil hopper, which prevents a possible so-called tunnel formation in the soil supply and makes manual intervention unnecessary.

A quantum leap in terms of quality

The outstanding quality of the machine guarantees top planting quality: With a constant central precision plant hole, the TM 2400 creates the perfect basis for consistently favourable cultivation conditions as well as consistent plant quality.

TECHNICAL DATA:

Pot size :	8 - 24 cm diameter (double pot holders: 8-13 cm)
Production speed:	up to 4,000 respectively 7,000 pots / hour
Soil hopper:	1,500 litres
Soil hopper (extended):	2,200 litres / 3,000 litres
Transport dimensions (LxWxH):	4,10 x 1,90 x 1,95 m
Weight:	approx. 1500 kg

ACCESSORIES:

Additional module for fast changeover to double pot holders:

- Double drilling system, 2nd magazine, twin pot holders

fertiliser doser, belt storage magazine, soil hopper chute, trailer coupling, stainless steel shovels, special tyres, addition for orchids, drill motor reinforcement
